

**In the Claims**

1. (Currently Amended) A method for defining a composite web page, comprising:

identifying a web page;

analyzing the web page to determine a list of elements, each element corresponding to a particular portion of the content of the identified web page;

presenting the determined list of determined elements to a user in a navigation pane, the navigation pane presenting the determined list of elements in the form of a tree structure that provides a visual representation of relationships between the elements corresponding to particular portions of the content of the identified web page, the navigation pane operable to allow the user to view and select one or more of the elements corresponding to particular portions of the content of the identified web page from the determined list of elements;

receiving a user selection of at least one element from the determined list of elements;

presenting, in a preview pane, the particular portion of the content of the identified web page corresponding to the at least one selected element from the determined list of elements, the preview pane operable to allow the user to visually verify the user selection; and

registering the user selection of the at least one element from the determined list of elements.

2. (Original) The method of claim 1, wherein registering includes storing the user selection in a local registry.

3. (Original) The method of claim 1, wherein registering includes transmitting the user selection to a remote server for storage.

4. (Original) The method of claim 1, further comprising creating a specification, the specification including data defining how to fetch at least one web page associated with the selected elements and how to extract the selected elements.

5. (Previously Presented) The method of claim 1, wherein identifying the web page includes identifying a plurality of web pages; and wherein the list includes elements corresponding to particular portions of the content of each of the plurality of web pages.

6. (Original) The method of 5, further including defining segments of the list according to each of the plurality of web pages.

7. (Original) The method of claim 6 where presenting includes presenting each of the segments of the list at separate times.

8. (Original) The method of claim 1, further comprising determining an identifier associated with the user and wherein registering includes storing the identifier.

9. (Currently Amended) A method for presenting a composite web page, comprising:

receiving a user request to present a composite web page, the composite web page defined by:

analyzing an identified web page to determine a list of elements, each element corresponding to a particular portion of the content of the identified web page;

presenting the determined list of determined elements to a user in a navigation pane, the navigation pane presenting the determined list of elements in the form of a tree structure that provides a visual representation of relationships between the elements corresponding to particular portions of the content of the identified web page, the navigation pane operable to allow the user to view and select one or more of the elements corresponding to particular portions of the content of the identified web page from the determined list of elements; and

receiving a user selection of at least one element from the determined list of elements;

identifying at least one element of the composite web page;

retrieving the at least one identified element; and

rendering the at least one identified element to form the composite web page.

10. (Original) The method of claim 9, wherein identifying includes accessing a registry.

11. (Original) The method of claim 10, wherein identifying includes:  
determining an identifier associated with the user; and  
accessing the registry is based on the identifier.

12. (Original) The method of claim 9, wherein retrieving includes:  
retrieving a web page associated with an element; and  
extracting the element from the associated web page.

13. (Original) The method of claim 9, wherein identifying includes:  
accessing a registry, the registry including data defining the position of each element;  
and  
wherein rendering includes displaying each element according to the data.

14. (Currently Amended) A system for defining a composite web page, comprising:

a processor;

a memory coupled to the processor storing processor executable instructions to control the operation of the processor;

the processor executable instructions including:

instructions to identify a web page;

instructions to analyze the web page to determine a list of elements, each element corresponding to a particular portion of the content of the identified web page;

instructions to present the determined list of elements to a user in a navigation pane, the navigation pane presenting the determined list of elements in the form of a tree structure that provides a visual representation of relationships between the elements corresponding to particular portions of the content of the identified web page, the navigation pane operable to allow the user to view and select one or more of the elements corresponding to particular portions of the content of the identified web page from the determined list of elements;

instructions to receive a user selection of at least one element from the determined list of elements;

instructions to present, in a preview pane, the particular portion of the content of the identified web page corresponding to the at least one selected element from the determined list of elements, the preview pane operable to allow the user to visually verify the user selection; and

instructions to register the user selection of the at least one element from the determined list of elements.

15. (Currently Amended) A system for presenting a composite web page, comprising:

a processor;

a memory coupled to the processor storing processor executable instructions to control the operation of the processor;

the processor executable instructions including:

instructions to receive a user request to present a composite web page, the composite web page defined by:

analyzing an identified web page to determine a list of elements, each element corresponding to a particular portion of the content of the identified web page;

presenting the list of determined elements to a user in a navigation pane, the navigation pane presenting the determined list of elements in the form of a tree structure that provides a visual representation of relationships between the elements corresponding to particular portions of the content of the identified web page, the navigation pane operable to allow the user to view and select one or more of the elements corresponding to particular portions of the content of the identified web page from the determined list of elements; and

receiving a user selection of at least one element from the determined list of elements;

presenting, in a preview pane, the particular portion of the content of the identified web page corresponding to the at least one selected element from the determined list of elements, the preview pane operable to allow the user to visually verify the user selection;

registering the user selection of the at least one element from the determined list of elements;

instructions to identify at least one element of the composite web page;

instructions to retrieve the at least one element; and

instructions to render the at least one element to form the composite web page.

16. (Currently Amended) A computer-readable storage medium encoded with processing instructions for defining a composite web page, including:

computer readable instructions for identifying a web page;

computer readable instructions for analyzing the web page to determine a list of elements, each element corresponding to a particular portion of the content of the identified web page;

computer readable instructions for presenting the list to a user in a navigation pane, the navigation pane presenting the determined list of elements in the form of a tree structure that provides a visual representation of relationships between the elements corresponding to particular portions of the content of the identified web page, the navigation pane operable to allow the user to view and select one or more of the elements corresponding to particular portions of the content of the identified web page from the determined list of elements;

computer readable instructions for receiving a user selection of at least one element from the list of elements;

computer readable instructions for presenting, in a preview pane, the particular portion of the content of the identified web page corresponding to the at least one selected element from the determined list of elements, the preview pane operable to allow the user to visually verify the user selection; and

computer readable instructions for registering the user selection of the at least one element from the determined list of elements.

17. (Currently Amended) A computer-readable storage medium encoded with processing instructions for presenting a composite web page, including:

computer readable instructions for receiving a user request to present a composite web page, the composite web page defined by:

analyzing an identified web page to determine a list of elements, each element corresponding to a particular portion of the content of the identified web page;

presenting the list of determined elements to a user in a navigation pane, the navigation pane presenting the determined list of elements in the form of a tree structure that provides a visual representation of relationships between the elements corresponding to particular portions of the content of the identified web page, the navigation pane operable to allow the user to view and select one or more of the elements corresponding to particular portions of the content of the identified web page from the determined list of elements;

and receiving a user selection of at least one element from the determined list of elements;

computer readable instructions for identifying at least one element of the composite web page;

computer readable instructions for retrieving the at least one identified element; and

computer readable instructions for rendering the at least one identified element to form the composite web page.

18. (Previously Presented) The method of claim 1, wherein analyzing the web page includes parsing HTML source code of the web page.

19. (Cancelled)

20. (Previously Presented) The method of claim 9, wherein analyzing the web page includes parsing HTML source code of the web page.
